# GARA TRADER SERVICE TERMS

These GARA Trader Service Terms (the “Trader Terms”) govern the automated spot-trading bot service (also shown as “Trading Bots”) made available through the Coingarage Platform at https://coingarage.us. The service provider is Coingarage US LLC, 1001 S MAIN ST, STE 600, KALISPELL, MONTANA 59901, USA (“Coingarage”, “we”, “us”).

These Trader Terms are Service Terms under the General Terms and Conditions of the Coingarage Platform (“General Terms”). Orders generated by a Bot are also subject to the Spot Market Terms and the applicable execution rules. If these Trader Terms conflict with the General Terms or Spot Market Terms on a matter specific to the Bot service, these Trader Terms control for that matter. Capitalized terms not defined here have the meanings given in those documents.

## 1. GARA Trader

**1.1. Service.** GARA Trader is a customer-configured automation tool for supported spot trading pairs. Each configured automated strategy is a “Bot”. Once activated, a Bot may submit and manage spot Orders according to the parameters you confirm, without requesting approval for each individual Order. All actual executions remain subject to the Spot Market Terms.

**1.2. Available Strategies.** The Platform may offer Grid and Dollar-Cost Averaging (“DCA”) Bots. A Grid Bot seeks to place purchase and sale Orders across a defined price range. A DCA Bot uses an initial Order and, where configured, additional purchase or safety Orders and exit conditions. Available parameters, limits and controls are displayed in the relevant creation flow.

**1.3. Scope of Launch Features.** The Platform identifies the features available at any given time. AI-assisted setup, external market intelligence, copy trading, premium or other strategy tools are not part of the service merely because they are referenced or marked “Coming soon”. They become available only after expressly enabled and disclosed by the Platform, subject to any required supplemental terms.

**1.4. No Advice or Discretionary Management.** You select or confirm the strategy, pair, range, allocation and other parameters. Coingarage does not independently select investments for you, manage your portfolio on a discretionary basis, provide individualized investment advice or guarantee any performance. The service is spot-only and is not available for securities, derivatives, margin or leveraged transactions unless lawfully supported under separately applicable terms.

## 2. Creating, Funding and Operating Bots

**2.1. Account and Eligibility.** You must hold an eligible Account (the “Main Account”), complete any required identity verification and be located in a Supported Jurisdiction. A valid subscription or other Platform-granted plan entitlement and sufficient available Digital Assets are required before a Bot can be operated. We may restrict strategies or trading pairs due to compliance, liquidity, operational or legal requirements.

**2.2. Bot Setup.** You select a supported Bot strategy, specify your investment amount and configure the available parameters. You are responsible for reviewing and confirming your selected configuration and any displayed estimates before activation. Estimated or historical returns are not guaranteed.

**2.3. Grid Start and Orders.** A Grid Bot operates within the price range and parameters confirmed by you. Depending on the available execution configuration, the Bot may establish an initial position and automatically place purchase and sale Orders at designated price levels. Supported Order types, execution conditions and applicable limits are disclosed on the Platform. Order execution is subject to market conditions, available liquidity and the Spot Market Terms.

**2.4. Grid Range and Price Conditions.** A Grid Bot may only start trading when the required market conditions are satisfied, including the configured trading range, applicable minimum order sizes, tick increments, depth and liquidity. If the price is outside the permitted range, the Bot may remain pending and begin when the conditions return, subject to any displayed controls. A Bot may not start at all if the conditions are never met.

**2.5. DCA Start and Orders.** For DCA Bots, you may choose “Start now” or “Start at price”, where these options are available on the Platform. Additional DCA Orders, maximum number of safety Orders and funding requirements are subject to the limits shown during setup. A price-triggered DCA Bot may remain pending and may never begin if its trigger is not reached.

**2.6. Bot Account and Capital Allocation.** Each Bot operates through a dedicated technical subaccount (a “Trading Bot Account”) linked to your Main Account. The Trading Bot Account is created and managed automatically by the Platform and does not constitute a separate customer Account. Assets allocated to an active Bot cannot be independently withdrawn, transferred or used for other purposes until the Bot is terminated and the applicable settlement procedures are completed.

**2.7. Investment and Funding.** You select the amount you wish to allocate to a Bot. Before confirmation, the Platform displays the total amount required from your Main Account, taking into account any applicable trading fees or reserves. Upon confirmation, the Platform automatically transfers the required funds to the Trading Bot Account, subject to sufficient available funds and applicable validations. The value and composition of the Bot's assets may subsequently change as a result of trading activity, market movements, profits, losses and fees.

**2.8. Order Limits, Partial Execution and Reconciliation.** Orders and transfers are subject to the trading pair’s minimum and maximum sizes, exchange precision, account and turnover limits, available balances and technical controls. Orders may be rejected, delayed, partially executed or cancelled under the applicable Spot Market Terms. Where execution or transfer status is uncertain, we may postpone further action while records are reconciled.

**2.9. Monitoring and Changes.** You can monitor the Bot through the Platform, including available status, balances, execution history and performance information. Depending on the released feature set, you may be offered pause, resume and parameter changes. These controls are available only where expressly shown and may take time to take effect. A pending cancellation does not reverse trades already executed.

**2.10. Termination and Asset Return.** You may terminate a Bot through the Platform. Upon termination, the Platform cancels outstanding Orders where possible and, following settlement and reconciliation, automatically returns the remaining assets to your Main Account. Where available, you may choose to retain the acquired Digital Assets or convert them to USDC before their return. Conversion may involve trading fees, slippage and market risk. Technical, legal or compliance restrictions may delay the settlement and return of assets.

## 3. Subscriptions and Fees

**3.1. Plan Requirement.** Access to GARA Trader is subject to an active subscription or other entitlement granted by the Platform. Coingarage may offer different subscription plans with varying limits, features and benefits, including the number of active Bots and access to additional Platform services. The applicable plan features, limits and charges are displayed on the Platform before purchase. A subscription does not guarantee uninterrupted availability or operation of any Bot**.**

**3.2. Plan Tiers and Prices.** Subscription plans may be offered on a monthly or annual basis. Annual subscriptions may be offered at a discounted price compared with equivalent monthly payments. The applicable subscription price, billing period, discount, features and limits are those displayed on the Platform at the time of purchase. Coingarage may introduce, modify or discontinue plans and benefits prospectively, subject to applicable notice and consumer-protection requirements.

**3.3. USDC Payment from Main Account.** Subscription fees are payable in USDC and are deducted from your available Main Account balance. By confirming a subscription purchase, you authorize Coingarage to collect the applicable fee. The exact amount payable is displayed before confirmation. If sufficient funds are unavailable or payment cannot be completed, the subscription may not be activated or renewed.

**3.4. Plan Period, Renewal and Cancellation.** Your paid access lasts for the monthly or annual period confirmed at purchase. Automatic renewal applies only if the Platform offers that feature and you separately opt in after clear disclosure of the amount, frequency, renewal timing and cancellation method. If enabled, we may debit the Main Account in USDC at renewal. You may disable renewal through the Plan interface before the next charge is processed. Turning off renewal does not itself cancel a paid period already in progress.

**3.5. Plan Expiry and Bot Operation.** If your subscription expires or is not renewed, access to create new Bots may be restricted, and existing Bots may be suspended or terminated in accordance with the procedures disclosed on the Platform. Expiration of a subscription does not, by itself, authorize the automatic sale or conversion of your Digital Assets. Any termination, settlement and return of assets remains subject to the applicable Bot settings, execution rules and risk controls.

**3.6. Subscription Changes and Refunds.** A change in plan prices or benefits applies only prospectively to new purchases or renewals, subject to applicable notice and consent requirements. Paid subscription fees are not ordinarily refunded solely because you stop using a Bot or disable future renewal; this does not limit mandatory refund, cancellation or other consumer rights under applicable law. Any upgrade, downgrade or proration mechanism applies only if expressly offered and disclosed at the time.

**3.7. Spot-Trading Fees.** Each Bot-generated Order is separately subject to the applicable exchange or execution fees and other charges disclosed under the Spot Market Terms and Fee Schedule. Applicable trading fees are taken into account in the Bot's funding and performance calculations as specified on the Platform. Any displayed profit is not a guarantee of the amount available for withdrawal.

**3.8. Success Fee.** In addition to subscription and ordinary spot-trading fees, Coingarage may charge a Success Fee on positive net realized profit generated by completed Bot trading cycles. The applicable Success Fee rate is disclosed on the Platform before Bot activation. Net realized profit is determined after deduction of the trading fees attributable to the relevant cycle. No Success Fee is charged on a cycle that generates zero or negative net realized profit. The calculation is based on actual executed trades, including partial executions, and excludes unrealized gains. Any change to the Success Fee rate applies prospectively in accordance with the applicable terms and required customer disclosures.

**3.9. Success Fee Collection.** The Success Fee is calculated, denominated and automatically collected in USDC when it becomes due under the applicable trading-cycle rules. By activating a Bot, you authorize the deduction of the applicable Success Fee from your available USDC balance through the Platform's designated collection mechanism. If collection cannot be completed due to insufficient available funds or technical restrictions, Coingarage may temporarily restrict further Bot trading until the outstanding fee is resolved.

## 4. Trading Results and Risk Disclosures

**4.1. Risk of Loss.** Automated trading can result in substantial or total loss of allocated Digital Assets. No Grid or DCA strategy guarantees profit, an effective stop-loss, preservation of principal or avoidance of unfavorable prices. Automation does not remove market risk.

**4.2. Market and Execution Risk.** Thin order books, volatility, sudden price movements, gaps, spreads, slippage, partial fills, exchange outages and minimum-size rules may prevent entry, cancellation, exit or the intended trading cycle. A LIMIT Order may not fill at all; an enabled MARKET Order may execute at a price materially different from a displayed estimate.

**4.3. Technical and Third-Party Risk.** The service depends on external trading infrastructure, market data, custody and communication services. Rate limiting, data interruptions, API errors, stale prices, unconfirmed transfers and account restrictions may delay or interrupt a Bot. We may suspend Orders, subscriptions or withdrawals when required for reconciliation, account safety, compliance or risk management.

**4.4. Performance Display.** The Platform may display realized trading-cycle results, unrealized profit or loss, total Bot performance and applicable fees separately. Realized cycle profit is based on completed trades after attributable trading fees, while unrealized results reflect the estimated current value of open positions. Total Bot performance may include both realized and unrealized results, adjusted for applicable Success Fees and other relevant charges. A profitable individual trading cycle does not necessarily mean that the Bot as a whole is profitable. Displayed values may be delayed or temporarily unavailable where underlying execution data cannot be reliably verified. Past results do not guarantee future performance.

**4.5. Customer Responsibility.** You are responsible for choosing and monitoring strategy parameters, trading pairs, account balance, plan renewal and whether to continue operating a Bot. A Bot may continue submitting Orders during unfavorable conditions, subject to its configuration and safeguards. Your decision to use any Bot is made at your own risk.

## 5. Final Provisions

**5.1. Electronic Instructions.** By confirming a Bot or subscription through the Platform, you authorize the related automated Orders, transfers between your Main Account and Trading Bot Account, and applicable fee deductions described in these Trader Terms. Electronic records, execution logs and confirmations may be used as evidence of your instructions to the extent permitted by law.

**5.2. Applicable Consumer Laws.** Subscription marketing, renewal, consent and cancellation practices remain subject to applicable federal and state consumer-protection law, including Section 5 of the Federal Trade Commission Act and the Restore Online Shoppers' Confidence Act where applicable. Nothing in these Trader Terms limits rights that cannot lawfully be waived.

**5.3. General Terms.** The General Terms and Spot Market Terms govern matters not specifically addressed here, including Supported Jurisdictions, identity verification, security, compliance holds, applicable fees, order execution, liability, termination, privacy and dispute resolution. Their applicable Montana governing-law and forum provisions remain in effect to the extent permitted by law.

**5.4. Language.** These Trader Terms are written in English. Any translation is for convenience only; the English version controls to the extent permitted by law.

**5.5. Severability.** If any provision is invalid or unenforceable, the remaining provisions continue in effect and the affected provision will be enforced to the maximum extent permitted by law.

**5.6. Effective Date.** These GARA Trader Service Terms are effective from November 16, 2026.
